

RoHS compliant
40Gb/s CSFP LR4 Optical Transceiver
40GBASE-LR4, up to 10km SM Fiber Link

Features

- 4x10Gb/s parallel optical interface compliant to 802.3ba 40G LR4
- Uncooled 4 CWDM DFB transmitters and PIN photodiode receivers
- Form factors compliant to CFP MSA
- XLAUI High Speed Electrical Interface
- IEEE compliant MDIO interface for management and digital diagnostic monitor
- Single +3.3V power supply, operating case temperature: 0~70C
- All-metal housing for superior EMI performance
- Advanced firmware allows encryption information of customer system stored in transceiver
- RoHS compliant
- No reference clock needed

Applications

- Rack to rack
- Data centers
- Metro networks
- Switches and Routers

RoHS compliant
40Gb/s CSFP LR4 Optical Transceiver
40GBASE-LR4, up to 10km SM Fiber Link

1. General Description

The CL-CSFP_LR4 is a 40Gb/s transceiver module for optical communication applications compliant to 40GBASE-LR4 of the IEEE P802.3ba standard. The module converts 4 inputs channels of 10Gb/s electrical data to 4 CWDM optical signals and then multiplexes them into a single channel for 40Gb/s optical transmission. Reversely on the receiver side, the module de-multiplexes a 40Gb/s optical input into 4 CWDM channels of optical signals and then converts them to electrical data for 4 output channels.

The central wavelengths of the 4 CWDM channels are 1271, 1291, 1311 and 1331 nm as members of the CWDM wavelength grid defined in ITU-T G694.2. For SMF applications, the transceiver module has an operating range of 2m~10km.

The CL-CSFP_LR4 is designed with form factor, optical/electrical connection and MDIO interface according to the CFP Multi-Source Agreement (MSA). The innovative design has all the fibers inside the CFP package configured without any splicing or non-permanent connector. Also, fiber routines are neatly organized and fixed inside a stainless steel container. For mechanical and environmental reliability, the WDM sections are aligned and secured to the container by laser welder, and then aligned and affixed with each CWDM laser or PIN/TIA TO to form an integrated structure of TOSA or ROSA.

2. Functional Description

The CL-CSFP_LR4 contains a duplex SC connect or LC connector for the optical interface and a 148-pin connector for the electrical interface. The chart in section 3 shows the functional block diagram of the CL-CSFP_LR4 CFP Transceiver.

Transmitter Operation

The transceiver module receives 4 channels of 10Gb/s electrical data, which are processed by a 4 channel Clock Data Recovery (CDR) IC that reshapes and reduces the jitter of each electrical signal. Subsequently, a DML laser driver IC converts each channel of the 4 electrical signals to optical signal from one of the 4 CWDM lasers. The optical output power is maintained constant by an automatic power control (APC) circuit. All of 4 optical signals are multiplexed by CWDM filters in a daisy-chain configuration to form a single optical output of 40Gb/s.

Receiver Operation

The receiver section de-multiplexes the optical input of 40Gb/s signal into 4 optical signals of CWDM wavelengths. Each optical signal is converted to electrical signal by one of 4 PIN/TIA. All of the 4 electrical signals are feed to another CDR IC that provides limiting amplification, and reshapes and retimes each electrical signal as one of the 4 output channels.

MDIO Interface

The CFP Module supports alarm, control and monitor functions via hardware pins and via an MDIO bus. Upon module initialization, these functions are available. CFP MDIO electrical interface consists of 8 wires including 2 wires of MDC and MDIO, as well as 5 Port Address wires, and the Global Alarm wire. MDC is the MDIO Clock line driven by host and MDIO is the bidirectional data line driven by both host and module depending upon the data directions. The CFP uses pins in the electrical connector to instantiate the MDIO interface, listed in Table 1: MDIO Interface Pins.

Pin Assignment and Pin Description

The CFP connector has 148 pins which are arranged in Top and Bottom rows. The pin map is shown in Table 2 below. The detailed description of the Bottom row ranges from pin 1 through pin 74 and is shown in Table 3 below. The pin orientation is shown below in Figure 1.

7. Mechanical Dimensions

8. ESD

This transceiver is specified as ESD threshold 2kV for all electrical input pins, tested per MIL-STD-883, Method 3015.4 /JESD22-A114-A (HBM). However, normal ESD precautions are still required during the handling of this module. This transceiver is shipped in ESD protective packaging. It should be removed from the packaging and handled only in an ESD protected environment.

9. Laser Safety

This is a Class 1 Laser Product according to IEC 60825-1:1993+A1:1997+A2:2001. This product complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated (July 26, 2001)
